

EURO-AIR QUALITY LABEL

Of course the Euro-Air label stands for:
Quality but then quality in the broadest sense of the word

First of all of course quality of the product. The manufacturers of the products with the Euro-Air Quality label guarantee a constant quality of their products by intermediate inspections, final testing and a clear instruction- and installation manual with each heater. The basis of this quality of the end-product lies already with the suppliers: the Euro-Air manufacturer imposes certain quality standards upon her suppliers and demands from them, too, products of a constant quality. Euro-Air demands that all endproducts must be CE-approved. Consequence is that the independent approving gasinstitutes carry out periodical inspections whether the heaters with CE-approval still meet the CE-requirements.

Next to that, the Euro-Air label guarantees that the heaters also comply with any additional national requirements so that situations can be prevented in which a heater does indeed have the CE-approval but is not produced in conformity with a national law or regulation because of which it is still not allowed to apply the heater in that country (f.i. the law on NO_x-emission in the Netherlands and the high efficiency-requirements in Germany).

Secondly, the quality of the company itself plays an important role. As condition to be allowed to apply the qualitylabel. Euro-Air demands that the manufacturer is ISO-9001 certified. Within this qualitysystem not only the supervision on the productionprocess is guaranteed but also other aspects as correct delivery, fulfilling agreements, service, entrance supervision, and all other aspects which not immediately refer to the product itself but to bear upon the function of the company.

Last but not least Euro-Air imposes certain requirements upon the quality of the documentation which it`s members publish. All members have committed themselves to publish only technical information which has been proven by testing and which can be verified by an independent organisation. All manufacturers use the same descriptions, measuring methods and measuring units to obtain comparable information about the different products. With this commitment, Euro-Air tries to achieve that the offered programmes of the different manufacturers become more transparent

so that a consumer can come to a good comparison without having to study the different products thoroughly.

In short, the Euro-Air Quality Label assures you that you purchase not only a quality product but also that a quality company stands behind this product!
