

EURO-AIR

Hydrogen-Statement:

Hydrogen for decentralized heating Years 2025-2029

20% hydrogen appliance:

Appliance designed and approved to operate safely and efficiently using a gas that has a fluctuating hydrogen content between 0% and 20% by volume.

100% hydrogen-ready appliance:

Gas appliance designed and approved to be installed and to operate on natural gas and, following a conversion and recommissioning process, can operate safely and efficiently using 100% hydrogen.

Decentralized heating appliances placed on the EU market:

- from 2025 shall be capable to process up to 20 vol% hydrogen
- from 2029 shall be ready to be retrofitted from natural gas to 100 vol% hydrogen.
